

Tiptop Virtual Academy Event Model

The Physics of Institutional Change

Version: 2.0 Foundation Draft

Purpose

The Event Model defines every significant occurrence that changes the state of the Academy.

Events are the moments when something meaningful happens.

An application is submitted.

A lesson begins.

A payment is received.

A teacher is assigned.

A grade is published.

Every operational process, lifecycle transition, institutional decision, audit record, notification, report, and digital interaction ultimately originates from one or more events.

The Academy therefore understands itself not merely as a collection of entities, but as a continuous stream of meaningful events.

Event Principles

Principle 1 — Nothing Changes Without an Event

Institutional state changes only because an identifiable event has occurred.

No record changes spontaneously.

Every transition has a cause.

Principle 2 — Every Event Has an Origin

Every event is triggered by:

- A person
- A system
- Time
- Another event

No event exists without an origin.

Principle 3 — Every Event Produces Consequences

An event may:

- change a lifecycle,
- create information,
- update information,
- notify people,
- trigger decisions,
- initiate workflows,
- generate reports,
- activate AI capabilities,
- or produce additional events.

Events are causes.

Everything else is an effect.

Principle 4 — Events Are Permanent

Events are historical facts.

They may be corrected through subsequent events.

They are never erased from institutional history.

Event Categories

The Academy recognizes the following categories of events.

Identity Events

Examples:

Person Registered

User Account Created

Identity Verified

Role Assigned

Permission Granted

Password Reset

Account Suspended

Account Reactivated

Admissions Events

Examples:

Enquiry Received

Application Started

Application Submitted

Application Reviewed

Interview Scheduled

Interview Completed

Admission Offered

Admission Accepted

Admission Declined

Enrollment Events

Examples:

Enrollment Created

Enrollment Confirmed

Enrollment Activated

Enrollment Deferred

Enrollment Suspended

Enrollment Completed

Enrollment Cancelled

Academic Events

Examples:

Programme Created

Subject Assigned

Lesson Planned

Lesson Published

Lesson Delivered

Attendance Recorded

Assignment Released

Assignment Submitted

Assessment Conducted

Grade Published

Academic Report Generated

Promotion Approved

Graduation Confirmed

People Events

Examples:

Vacancy Approved

Application Received

Interview Conducted

Teacher Appointed

Teacher Onboarded

Professional Development Completed

Performance Review Completed

Employment Ended

Financial Events

Examples:

Invoice Issued

Payment Initiated

Payment Confirmed

Refund Approved

Refund Processed

Scholarship Awarded

Financial Adjustment Recorded

Communication Events

Examples:

Announcement Published

Email Sent

Meeting Scheduled

Meeting Completed

Complaint Received

Complaint Resolved

Feedback Submitted

Governance Events

Examples:

Policy Proposed

Policy Approved

Policy Published

Audit Started

Audit Completed

Risk Identified

Risk Closed

Technology Events

Examples:

Integration Connected

System Updated

Backup Completed

Security Alert Raised

Incident Resolved

AI Model Updated

Digital Resource Published

Quality Events

Examples:

Review Initiated

Improvement Recommended

Improvement Approved

Improvement Implemented

Outcome Measured

Event Anatomy

Every institutional event shall define:

Event Name

A unique and descriptive name.

Event Type

Business

Academic

Financial

Technical

Governance

Operational

Trigger

What caused the event?

Initiator

Who or what initiated it?

Affected Entity

What changed?

Owning Domain

Which business domain is accountable?

Lifecycle Transition

What state changed?

Rules Applied

Which institutional laws governed this event?

Decisions Required

Does the event require human or automated decision-making?

Notifications

Who must be informed?

Audit Record

What evidence must be preserved?

Event Relationships

Events frequently produce additional events.

Example:

Application Submitted

↓

Application Validated

↓

Admissions Review Started

↓

Admission Decision Made

↓

Admission Offered

↓

Offer Accepted

↓

Enrollment Created

↓

Invoice Issued

↓

Payment Confirmed

↓

Student Activated

One event creates the conditions for the next.

Event Ownership

Every event belongs to exactly one primary domain.

Other domains may observe or respond.

Ownership remains singular.

Artificial Intelligence and Events

Artificial Intelligence responds to events rather than replacing them.

Examples:

Application Submitted

↓

Admissions AI evaluates completeness.

Lesson Published

↓

Academic AI verifies learning objectives.

Payment Confirmed

↓

Finance AI performs reconciliation.

Attendance Recorded

↓

Student Success AI detects concerning attendance patterns.

AI participates because events occur.

It does not invent events.

Closing Statement

Events are the heartbeat of Tiptop Virtual Academy.

They transform intention into action, action into evidence, and evidence into institutional knowledge.

By defining events explicitly, the Academy ensures that every change is intentional, every consequence is traceable, and every part of the institution moves in harmony with its mission, its laws, and its commitment to educational excellence.
