

Tiptop Virtual Academy Lifecycle Model

The Evolution of Everything

Version: 2.0 Foundation Draft

Purpose

The Lifecycle Model defines how every significant entity within Tiptop Virtual Academy evolves from creation to retirement.

Rather than viewing institutional entities as static records, the Academy recognizes them as living components that move through well-defined stages.

Every lifecycle answers four fundamental questions:

- Where does it begin?
- What states can it occupy?
- What events cause change?
- When does it end?

This approach ensures consistency across operations, technology, governance, reporting, and artificial intelligence.

Lifecycle Principles

Every Entity Has a Beginning

Nothing exists without being intentionally created.

Every entity has an origin.

Every Entity Changes

Growth is expected.

Progress is measurable.

Transitions are explicit.

Every Transition Has a Cause

States never change without an event.

A payment changes an invoice.

An approval changes an application.

A lesson delivery changes attendance.

Every transition has a reason.

Every Entity Eventually Ends

Completion is part of life.

Graduation.

Retirement.

Archiving.

Deletion.

Closure.

Endings are managed, not ignored.

Student Lifecycle

Purpose:

Represents the learner's complete relationship with the Academy.

AI Lifecycle

AI capabilities are managed with the same discipline as institutional assets.

Improvement

Retirement

Artificial Intelligence continuously evolves but remains governed.

Lifecycle Governance

Every lifecycle within the Academy shall define:

- The current state.
- Permitted next states.
- Required approvals.
- Responsible domain.
- Responsible role.
- Mandatory records.
- Triggering events.
- Exit conditions.

No entity may transition outside its defined lifecycle without explicit institutional authorization.

Lifecycle Relationships

Lifecycles do not operate independently.

Examples include:

An accepted applicant may create an enrollment.

An enrollment activates a student record.

An active programme enables subject delivery.

A published lesson creates attendance opportunities.

A completed assessment produces grades.

A confirmed payment may activate enrollment.

A teacher onboarding process enables lesson assignment.

The completion of one lifecycle often triggers the beginning of another.

Closing Statement

The Lifecycle Model recognizes that Tiptop Virtual Academy is not defined by static records but by continuous journeys.

Every learner, educator, programme, lesson, policy, and institutional asset evolves through intentional stages that reflect the Academy's commitment to clarity, accountability, and continuous improvement.

By managing change explicitly, the Academy ensures that growth is measurable, decisions are traceable, and every journey is supported with excellence from beginning to end.
